

BIKE YOUTH

pedal-powered prototyping workshop

The prototypes at BikePort were tested by the group, gaining valuable insights into the forms and mechanics of their unique designs.

Cargo bicycles, trikes, and trailers provide scalable, infrastructure-ready solutions that significantly reduce our carbon footprint and alleviate traffic congestion in NYC.

Young designers from Pratt Youth collaborated with BikePort for a sketching and prototyping workshop. Students were challenged to propose innovative pedal-powered solutions to urban problems of their choice.

The projects varied widely, from a cooling station that doubles as an ice cream machine to a portable toilet trike, addressing the city's need for accessible facilities.
